

SAURABH CHIDRAWAR

Senior Java Backend Engineer | Full-Stack Developer | Cloud & Microservices Specialist

Hyderabad, India | saurabhchidrawar2@gmail.com | +91-9579646281 | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven **Senior Java Backend Engineer** with 3+ years of experience architecting and delivering **cloud-native microservices** on AWS using **Java 17, Spring Boot, and Kafka**. Proven expertise in **distributed systems design, RESTful API development, event-driven architecture, and ETL pipeline engineering**. Demonstrated ability to migrate legacy workloads to **AWS EKS, Lambda, and EMR**, reducing operational costs by **30%** and accelerating release cycles by **80%**. Full-stack delivery with **React, Redux, SQL/NoSQL databases**, and CI/CD automation using **Jenkins, Docker, and Kubernetes**. Domain expertise in **FinTech, Credit Analytics, Risk Management, and Digital Banking**.

TECHNICAL SKILLS

Languages	Java 8 / 17, Python, SQL, JavaScript, HTML, CSS
Frameworks	Spring Boot, Spring Security, Spring Data JPA, Spring MVC, Hibernate, React, Redux
Cloud & DevOps	AWS (EKS, Lambda, S3, RDS, EMR, Secrets Manager, Step Functions, EventBridge, IAM), Azure DevOps, Docker, Kubernetes, CI/CD, Jenkins, GitLab
Databases	MS SQL Server, PostgreSQL, OpenSearch, Elasticsearch, Redis, DynamoDB
Messaging	Apache Kafka, Kafka Debezium (CDC), Dead-Letter Queues (DLQ), Retry Queues
Big Data	Apache Spark, AWS EMR, Spark ETL, AWS Glue
API & Arch	RESTful API Design, Microservices Architecture, Event-Driven Architecture, Serverless, API Gateway
Testing & Obs.	JUnit, Mockito, JMeter, Selenium, BDD (Cucumber), Splunk, ELK Stack, Prometheus, Grafana
Tools	Git, GitHub, Liquibase, Swagger / OpenAPI, Postman, ArmorCode, Jira

PROFESSIONAL EXPERIENCE

Associate Engineer — Java Backend & Automation · S&P Global *Aug 2024 – Present | Hyderabad*

- Architected and deployed **5+ production-grade microservices** using **Java 17** and **Spring Boot** on **AWS EKS**, leveraging **Apache Kafka** for asynchronous inter-service communication, improving system decoupling, resilience, and fault tolerance.
- Engineered the 'MaxLimit' system with **Kafka Debezium CDC** connectors for **real-time Change Data Capture**, achieving **99.9% data consistency** across distributed MS SQL databases.
- Led end-to-end migration of **6 on-premise Spark ETL workloads** to **AWS EMR** using **Step Functions** and **EventBridge**, cutting operational costs by **30%** and improving data processing scalability.
- Directed product releases for **RiskGauge Plus** and **MaxLimit** modules — managing full lifecycle governance, stakeholder communication, and **zero-downtime deployments** for critical financial analytics services.
- Optimized **Spring Boot microservices** and **Spark jobs**, improving application response times by **20%** and significantly enhancing end-user experience for core Credit Analytics products.
- Secured **20+ Java microservices** by migrating credentials to **AWS Secrets Manager**; implemented **IAM-based access control** and centralized secret lifecycle management for production environments.
- Remediated **100+ security vulnerabilities** identified via **ArmorCode** scanning, enforcing **OWASP standards** and ensuring compliance with enterprise security policies for source code and third-party dependencies.
- Implemented **serverless ETL orchestration** using **AWS Lambda** and **Python Step Functions** to process **20+ daily data ingestion jobs**, reducing average batch processing time by **40%**.
- Designed and maintained **high-performance ETL pipelines** with **Java** and scheduled **CRON jobs** to transform complex Data Science outputs into structured, frontend-consumable datasets.

- Built a **Python-based BDD automation framework (CAFÉ)** leveraging **data-driven testing** methodology, expanding end-to-end test coverage and streamlining cross-layer **API and database validation**.
- Automated full **regression suites** within **Jenkins CI/CD pipelines**, reducing manual testing effort by **80%** and compressing release cycles from **10 hours to under 2 hours**.
- Conducted **load and performance testing** with **JMeter**, identifying and resolving backend API bottlenecks to maintain stability under **high-concurrency production loads**.

Software Engineer — Full-Stack Java Developer · NeoSoft Technologies Jan 2023 – Jun 2024 | Pune

- Developed mission-critical **backend microservices** using **Java** and **Spring Boot** for a **digital banking platform**, ensuring high availability, scalability, and reliability for insurance lifecycle functionalities.
- Designed and implemented secure **RESTful APIs** for policy management, customer data retrieval, and complex **financial transactions** — enabling seamless integration with third-party banking systems.
- Architected distributed messaging patterns with **Apache Kafka**, incorporating **retry topics, dead-letter queues (DLQ)**, and exponential backoff strategies, achieving **100% reliability** in critical banking workflows.
- Contributed full-stack development by optimizing **React frontend components** and **Redux state management**, enhancing UI performance and aligning with modern frontend security standards.
- Standardized **API documentation** using **Swagger/OpenAPI** and Postman, accelerating cross-team collaboration and reducing frontend-to-backend integration time.
- Improved system observability by integrating **Splunk, ELK Stack**, and **Prometheus** for real-time monitoring, enabling proactive detection of failures and performance regressions in production.
- Automated microservice repository migration to **GitHub** using custom internal tooling, preserving full commit history, branch configurations, and repository metadata.

EDUCATION

Bachelor of Engineering (B.E.)
Sinhgad College of Engineering, Pune

2018 – 2022
